

Prevention is Best Treatment For Carbon Monoxide Poisonings

Did you know that a killer could be lurking in your home or car right now? The problem is, this killer can strike without ever being seen, heard or smelled.

Each year, carbon monoxide poisoning kills nearly 500 people nationwide and sickens thousands more. The CDC ranked Wyoming as one of the states with a high reliable mortality rate from carbon monoxide. This year the number of calls that the poison center has received concerning carbon monoxide is **greater** than last year. More troubling is the fact that this figure is misleading because carbon monoxide poisoning is often under reported. It is imperative that the citizens of Wyoming understand the dangers, the symptoms and how to prevent poisoning from carbon monoxide.

Symptoms of carbon monoxide poisoning include sleepiness, headache, dizziness, blurred vision, nausea, shortness of breath and convulsions. The first step in treating carbon monoxide poisoning is getting the victim to fresh air. Then, seek medical attention immediately.

Carbon monoxide is a gas produced when fuels burn incompletely. It has no color, taste or smell. The major causes of carbon monoxide poisoning include:

- Using heating equipment that is in poor repair.
- Lack of ventilation in a car.
- Using a charcoal grill indoors.
- Using unvented space heaters.

When fresh air is available and fuel is burning properly, there is little danger of carbon monoxide poisoning. However, operating an internal combustion engine or a poorly adjusted fuel-burning appliance in a closed area without proper ventilation can become fatal.

Wyoming's Poison Center offers the following suggestions to help prevent carbon monoxide poisoning:

- Inspect all fuel-burning equipment yearly.
- Vent fuel-burning heaters to the outside.
- Do not use a gas range or an oven for heating a room.
- Never use a charcoal grill or hibachi inside.
- Install carbon monoxide detectors on every level of your house.
- Never leave a car running in an attached garage, even with the garage door open.
- Have the vehicle muffler and tailpipes checked regularly.

If you suspect carbon monoxide poisoning or if you have any questions, contact the Poison Center at toll-free at 1-800-222-1222. The Poison Center is sponsored by The Nebraska Medical Center, the University of Nebraska Medical Center, and the Wyoming Department of Health Office of Emergency Medical Services.
