

Dear Parents,

We have just completed a course on Poison Safety in our class. Accidental poisoning is a major cause of injury and death for children.

Smaller children cannot read, and are naturally curious. Please make sure that all products which are potentially poisonous are kept in their original container and in a locked place.

We would like to ask your assistance in reinforcing the classroom education programs by going over the materials brought home by your child.

Be sure to teach your children how to use the telephone and the phone numbers to use in case of an emergency.

We hope this information helps you in providing safety for your children. For further information, please contact the **Nebraska Regional Poison Center**, 1-800-222-1222; or in Omaha, 955-5555.

Sincerely,
